

## *New wave of the artificial intelligence (AI)... Robots are speaking with each other.*

Soon the world will notice “AI-empowered robotics” that are capable of working together, solving issues and negotiation while performing their tasks. This mutation in the field of development of AI workers, will be through what it’s called multi-agent AI system, that will be shown to the world in the beginning of 2025, according to the technology services giant CAPGEMINI.

- **THE AI BET BY BLOWING UP TESLA’S PROFITS... A HUGE DECREASE:**

The CNBC network says that agents like these need a group of AI-empowered robotics, or what is described as intelligence workers, who work together to solve the tasks in a cooperative way, according to CAPGEMINI.

The chief innovation officer “Pascal B.” said at the company of CNBC interview that his company now sees other companies negotiating about those technical agents.

He also sympathized that agencies that use AI-empowered workers and capable of making independent decisions is really, what we should expecting next year.

### **AI CLIENTS... WHO ARE THEY?**

The CAPGEMINI identified the AI clients as a technic that is used for working in an independent way and managing to look over high-level goals, and carrying out a difficult workflow with minimal direct human foresting, and mainly, they will serve as AI-empowered clients who work behind the scene to finish the tasks for humans.

According to CNBC, the USA is walking towards achieving this technology, according to PASCAL B., superior to Europe with huge proactive steps.

And in a new research report released this Monday, entitled “UTILIZING THE VALUE OF GENERATIVE ARTIFICIAL INTELLIGENCE”, CAPGEMINI, the artificial intelligence customer system’s developer, highlighted that the majority of companies included in the study were 82% of them specifically, in planning to add the AI clients in a year or three, when a 7% only didn’t plan to add the AI clients in a year or three in their work field.

Furthermore, the research relied on the survey that included more than 1100 companies with a revenue of **1billion dollars** or more, according to their nationality.

### **New wave or artificial intelligence... v2**

PASCAL BRIEBR announced to the CNBC network that the first main wave of AI in 2022, that BRIEBR also referred to it as v2, was understanding the concept of the AI, as well as understanding the model of the artificial intelligence LLM which means large language models, that’s based on chat to get orders and to complete the tasks.

Now, the AI and the GENERATIVE AI are close to each other, due to building these knowledge engines, and using the GENERATIVE AI to react with these engines, and applying this new idea for AI clients considering that they are either an alternative or an assistant for the tasks.

Moreover, according to the CAPGEMINI Company, 71% of organizations expect AI customers to facilitate automation, while 64% of other organizations will rest employees of recurring tasks and allow them to focus on value added jobs.

- **THE AI BUBLE IS ABOUT TO EXPLODE (METAPHOR):**

Certainly, numerous of companies still in the stage of experimenting with AI and developing it, even OPEN-AI organization, the industry leader, and supported by the MICROSOFT company, still spending hundreds of millions of dollars to develop large language models GPT and the chat robot CHATGPT.

Moreover, there are still many issues even the AI companies’ leaders in the world need to solve it by using technology, for example, there is a common obstacle in CHATGPT and GENERATIVE AI tools known as hallucinations, which is inaccurate data about the information that’s produced by these systems.

**“According to a recent article published by [AI-ain](#) , new environmental regulations are expected to reduce carbone missions significantly”**
